

The Bengal Curb Machine is manufactured with a single plunger linear compaction system. It produces up to a 12 x 12 curb with speeds up to 16 feet per minute. The Bengal comes standard with a Honda gas motor, and TYGAR™ is OEM Honda certified, which allows us to offer a 2-year warranty on the machine and motor.

Honda engineers put all of our equipment through extensive testing to ensure the motor specified for each machine is the correct horsepower. Our powder coat finish eliminates rust and provides a durable painted finish. All of the components are billet aluminum or plated steel and are all CNC machined. All of these coatings prohibit rust from occurring.

**Vscape Curbing**  
ROCHESTER, NY

We have been using Tygar equipment for over 4 years now. All of it is state-of-the-art, and our curbing is second to none! We fully recommend Tygar's equipment and staff. We are also grateful for the training and support after the purchase. Thank you to all.  
Dave

**And the BENGAL TG1000XL now includes:**

- TYGAR's poly-protective hopper liner
- CurbCable attachment for holding a cable reel
- 3 most popular landscape molds, and
- Our new and revised Curb Picture CD
